## PROFESSIONAL SUMMARY

Full Stack Software Engineer with 1.5+ years of experience building enterprise ERP systems, HRMS platforms, and POS solutions from scratch. I work across the entire stack — designing Angular and React frontends, writing Python/Django REST APIs, setting up MySQL databases, and deploying with Docker. I have shipped production modules used daily by real businesses, including full accounting systems, inventory management, attendance tracking, and role-based access control. I write clean, simple code and I am always looking to learn and improve.

## TECHNICAL SKILLS

**Frontend:** Angular, React.js, Next.js, TypeScript, Ionic, Material UI, Tailwind CSS, HTML5, CSS3, Bootstrap

**Backend:** Python, Django, Django REST Framework, Django ORM, REST API, Webhook Development

**Database:** MySQL, Schema Design, Live Migrations, Query Optimisation

**DevOps:** Docker, Nginx, SSL Certificate Management, DNS (A Records, CNAME), Vercel, Resellerclub

**Testing:** Manual Testing

**Design:** Figma — Wireframing, Prototyping, Component Design Systems

## WORK EXPERIENCE

**Software Engineer - Postulate Infotech Pvt. Ltd., Tuticorin**

Dec 2024 – Present

### 1. Accounts & Financial Statements Module

- Designed and built the complete database structure for a double-entry accounting system — covering receipts, payments, journals, contras, debit/credit notes, account masters, and voucher types.
- Wrote the logic for live financial reports: individual ledgers, group summaries, trial balance, profit & loss statements, and balance sheets — all updated in real time.
- Built a reference clearing system (New Reference, Advance, On Account, Against Reference) that keeps every transaction linked and accurate.
- The module is actively used in production by a real automobile business for daily financial operations.

### 2. Inventory & GST Compliance Module

- Built the full inventory system from scratch — product variants, purchase orders, sales orders, and Goods Received Notes (GRN).
- Implemented batch-wise stock tracking that updates automatically when stock moves between branches or locations.
- Created automated GST compliance reports so the business team can file taxes without manual data entry.
- Added multi-branch stock transfer features that work seamlessly across different store locations.

### 3. HRMS & Role-Based Access Control (RBAC)

- Built a custom RBAC system from the ground up — supporting Admin, Internal User, and Customer roles, each with specific View, Save, Edit, and Delete permissions set per page.
- Added security checks on every API endpoint using Django middleware to make sure no one can access pages or data they are not allowed to.
- Implemented session management using Django Session Framework — including automatic forced logouts when a session expires or permissions change.
- Designed an attendance system that supports both manual clock-in/out and QR-code-based geofenced check-ins for field staff.
- Built an employee timesheet tracker that logs daily hours, calculates totals, and exports reports for payroll.

### 4. Service Station Management & DevOps

- Built a complete service station workflow — customer enquiry intake, quotation generation, and automated follow-up reminders.
- Developed job card creation, service cost estimation, and final billing for automobile service centres.
- Packaged the full application into Docker containers and set up local orchestration for easy deployment.

- Handled all production server tasks — Nginx configuration, live Django ORM database migrations, manual SSL certificate renewals, and DNS record updates.

## INTERNSHIPS & PROJECTS

---

### Full Stack Developer & UI/UX Design Intern - Parts2product

Jun 2024 – Sep 2024

- Built a responsive Employee Management web application using React.js and Tailwind CSS, following custom wireframes I designed in Figma.
- Designed the complete UI/UX for a Water Fill Station web app — from user journey mapping to high-fidelity prototypes ready for development handoff.
- Worked closely with the product team to translate business needs into clean, usable interface designs.

### Frontend Software Developer Intern - ICANIO Technologies

Aug 2023 – Mar 2024

- Developed an E-Learning platform using Next.js and Material UI — focused on fast page loads and a smooth learning experience for students.
- Worked on a Traffic Violation Monitoring dashboard that shows real-time alerts generated by a Machine Learning model.
- Gained experience working in a team environment with code reviews, version control (Git), and sprint-based delivery.

## EDUCATION

---

### B.E. in Computer Science & Engineering

2020 – 2024 | Grade: 86.9%

*St. Mother Theresa Engineering College, Vagaikulam, Tuticorin*

### Higher Secondary Certificate (HSC)

2019 – 2020 | Grade: 60.67%

*Karapettai Boys Higher Secondary School, Tuticorin*

### Secondary School Leaving Certificate (SSLC)

2017 – 2018 | Grade: 91.2%

*St. Ignatius Hr. Sec. School, Tuticorin*

## RESEARCH PUBLICATIONS & CERTIFICATIONS

---

- Published & presented: "Helmet Detection & Number Plate Recognition using Machine Learning" — National Level Technical Conference NICTE'24.
- Published & presented: "Online Tourism Management System" — National Convention of Electronics & Communication Engineers.
- Workshop: "Journey of a Web Request in the Internet" — Anna University Regional Campus, Tirunelveli.
- Certifications: Java Programming & Internet of Things / IoT (St. Mother Theresa Engineering College).
- Additional Training: Python Scripting Foundations (EduPrep), 10-Day C Programming Track (BYTSINDIA).

## ADDITIONAL STRENGTHS

---

- Able to work independently and take full ownership of features from database design to frontend delivery.
- Strong understanding of REST API design, session security, and data integrity across large enterprise applications.
- Comfortable reading and improving existing codebases, not just building from scratch.
- Open to learning new technologies quickly, currently exploring Data Analytics.
- Languages: Tamil (Native), English (Professional Working Proficiency).
